

QUICKFRAMES™

The Leader in Engineered Structural Support Systems

Friday, January 20, 2023

RE: **QuickFrames USA**
State of Florida
CTS Job No. 23-0121

To whom it may concern,

Helmy A. Makar, P.E., M.S., who is BNC, Product Control Unit Supervisor with Miami-Dade County Department of Permitting, confirmed the following items on October 21, 2011 about the QuickFrames USA adjustable metal roof frame designed for the support of roof-mounted equipment and skylights:

1. A Notice of Acceptance (NOA) is an optional requirement.
2. The product's use does not require testing.
3. A Certificate of Competency is not required.
4. Structural calculations are required by a FL licensed and registered Structural Engineer for permitting for the site-specific location.

QuickFrames USA has consulting engineers licensed in all 50 states, including Florida. QuickFrames can therefore meet the requirements of Miami-Dade County to have a Florida licensed and registered engineer prepare the site-specific design, satisfying the Miami-Dade County requirement.

For QuickFrames projects located in Florida:

1. The contractor, building engineer, or owner shall provide data on the building structure and for the equipment that will be located on QuickFrames to QuickFrames USA.
2. QuickFrames' consulting engineers will design frames based on the site-specific information and will provide sealed site specific QuickFrames calculations and drawings for submittal to the required jurisdiction.
3. Verification of the capacity of the building structure is the responsibility of the building owner.

No QuickFrames product should be installed in Florida without site-specific review and design.

Respectfully submitted,

Gregory Kussmann
Partner/Member
